WHAT IS BLOCKCHAIN?

Blockchain is a distributed and decentralized digital ledger technology that records transactions across multiple computers in a way that ensures the security, transparency, and immutability of the data.

Unlike traditional centralized systems, blockchain operates on a network of computers (nodes) that work together to validate and record transactions. This decentralized structure eliminates the need for intermediaries like banks or payment processors.

ABOUT VRC SCAN

VRC is a revolutionary Blockchain platform that is built for efficiency, speed, reliability, and security. VRC scan is 3rd generation Blockchain Triple-Layered model with high-speed transactions and ultra-secure smart contracts.

VRC Blockchain is designed specially for payment solutions & provide model for worldwide business that will allow anyone to exchange & create value. The most important Feature of VRC blockchain is low transaction fees and high transaction speed.

VRC is a decentralized Layer 2 blockchain POA (Proof Of Authority), POS (Proof Of Stake), POB (Proof Of Burn), based on Ethereum Virtual Machine with a speed of 100k transactions per second.

WHAT IS CRYPTOCURRENCY?

Cryptocurrency is a digital or virtual form of currency that uses cryptography for security. Unlike traditional currencies issued by governments (such as the US dollar or the euro), cryptocurrencies operate on decentralized networks based on blockchain technology.

Cryptocurrencies exist only in electronic form and have no physical counterparts like coins or paper money. Cryptocurrencies operate on decentralized networks of computers (nodes) that collectively validate and record transactions.

Cryptocurrencies use blockchain technology to maintain a public ledger of all transactions. This decentralization means there is no central authority, like a government or bank, controlling the currency.
